

World Breastfeeding Week 30 Second PSA

World Breastfeeding Week is celebrated during the first week of August each year. It's a time to remind parents about the health benefits of nursing a child.

Infants who are breastfed are at a reduced risk for asthma, obesity, Type 2 diabetes, ear and respiratory infections, and sudden infant death syndrome. Not only does it benefit the child, but it reduces the risk of heart disease, Type 2 diabetes, and ovarian and breast cancer in the mom.
